Hi Greg,

IC water is incident command tool for drinking water protection. It represents a combination of PipelineNet and RiverSpill for source water. PipelineNet is Epanet in a GIS framework.

No, we (nhsr) did not develop it. OW did PipelineNet and I believe DoD did the RiverSpill and integration to IC Water.

Thanks

Rob

Rob,

Can you answer Greg's question.

Thank you.

Alan

What is ICWater? Is it based on our work?

Hi Ex. 6 - Personal Privacy

Thanks very much for the email! Some folks from ANL working with DHS called me last Friday about ideas for modeling the spill and I pointed them to you and Rakesh. I had not heard if they contacted you. Nevertheless, it is nice to know the analysis was done right!

Thanks again and I hope all is well!

Rob

Rob

Just wanted to let you know that ICWater was used in the response to the West Virginia chemical spill by both DTRA and the Great Cincinnati Water Works (see message below).

I thought you might be interested in the use of this tool (with good results) during an emergency.

Subject: Spill update

Bill,

Sorry for the delay in giving updates. We have seen the bulk of the spill pass our intake now. We've still got a lot more samples to run and QC but so far, we have a good picture of the peak at three locations. The peak as it passed here was between noon and 1 pm yesterday. The two good IC Water runs based on Huntington and Portsmouth data predicted the peak at 1PM and 10:30 AM respectively. Even the leading edges were relatively close.

We have plenty to discuss and share with you and your team, but for now I just have one quick question: Where do I get the latest version of IC Water? The CBRNE website doesn't seem to work with the link I have.

Thanks again for all your help!
